

OMV — Design Review

Phase 1 — Approved Live: omv-iota.vercel.app

Phase 2 — Awaiting your approval

This document walks through every screen built so far: what it's for, the UX decisions behind it, which reusable components it's built from, and how it behaves across devices and themes.

Phase 1 — Foundation (approved)

1. Home / Landing Page

Purpose: First impression of the brand. Establishes the "boutique, not marketplace" positioning before any product catalogue exists.

Desktop — Dark theme (primary)

Every Outfit. Every Occasion. Every Family.

A boutique shopping experience for the whole family — curated fashion, personal styling and a calmer way to dress well.

[Shop the Collection](#)

[Explore Family Shopping](#)

WHY OMV

A shopping experience built around your family, not a marketplace.

Family Shopping

One account, one cart, every family member's profile and sizes in one calm, organized place.

Complete the Look

Curated pairings for every piece you choose — styling guidance, not guesswork.

AI Fashion Assistant

Personal styling suggestions tailored to your taste, occasion and family — arriving in Phase 3.

Loyalty & Rewards

Every purchase brings your family closer to rewards worth having.

Curated

Every collection hand-selected for quality and fit.

Trusted

Transparent orders, tracking and real customer care.

Personal

Styling built around your family, not a generic catalogue.

Create your family profile and start building your look.

[Create Your Account](#)

Every Outfit. Every Occasion. Every Family.

Premium, curated family fashion — delivered with the trust and warmth of a boutique.

Trusted

Transparent orders, tracking and real customer care.

UX decisions:

- Hero leads with the full logo lockup and official tagline — the brand is the opening statement.
- No stock photography, per Brand Book guidance against generic stock images; none has been supplied yet.
- Four brand-pillar cards instead of a product grid, since Phase 1 has no catalogue.
- Purple reserved for the AI Fashion Assistant icon only; gold used sparingly (eyebrow label, trust-strip headlines).

Components used: Navbar, Footer, Card/CardTitle/CardDescription, Button (primary + outline).

Accessibility: Skip-to-content link, aria-labels on all icon buttons, aria-expanded/controls on mobile menu, proper heading hierarchy.

Responsive behavior: Nav collapses to hamburger + slide-down menu below the lg breakpoint. Pillar grid 4 → 2 → 1 columns. Hero buttons stack on mobile.

2. Sign In

Purpose: Authenticate returning customers. Gated only where required — checkout, wishlist, orders, family profiles, AI personalization.

The image shows a mobile app login screen for a brand called 'Overcomes'. The screen has a dark green background. At the top, there is a logo in the top left and a hamburger menu icon in the top right. Below the logo, the text 'Welcome back' is displayed in a large, white, serif font. Underneath, a smaller line of text says 'Sign in to manage your family profiles, wishlist and orders.' There are two tabs, 'Email' and 'Phone', with 'Email' being the active one. Below the tabs, there are two input fields: 'Email address' with the placeholder 'you@example.com' and 'Password' with a masked password '*****'. Below the password field, there is a checkbox labeled 'Remember me' and a link 'Forgot password?'. A large 'Sign In' button is positioned below these fields. At the bottom of the login section, there is a link 'New to OMV? Create an account'. The bottom half of the screen features a dark green background with the 'Overcomes' logo and the tagline 'Every Outfit. Every Occasion. Every Family.' Below this, there are three sections: 'Shop' with links for 'Women', 'Men', and 'Kids'; 'Account' with links for 'Order Tracking' and 'Wishlist'; and 'Company' with links for 'About OMV' and 'Contact'.

UX decisions:

- Email/Phone tab switcher, matching the PRD's dual login-method requirement.
- "Remember me" defaults on.
- Full logo lockup used here — an approved usage location.

Components used: Input (labelled, aria-describedby wired), Button, native tablist/tab.

Accessibility: Real associated labels, autoComplete hints, error state wired to role="alert"/aria-invalid.

Responsive behavior: Single-column form at all sizes by design.

3. Create Account

Purpose: New customer registration — entry point into loyalty, wishlist and family-profile features.

UX decisions:

- Deliberately short form (name, email, password) — family profiles and addresses are collected later in the dashboard (Phase 3).
- Plain-language password hint instead of a strength meter, matching the brand's calm tone.

Components used: Same Input/Button set as Sign In, for visual and behavioral consistency.

Accessibility: Same labelled-field pattern; autoComplete hints for name/email/new-password.

Responsive behavior: Same single-column, centered layout at all sizes.

Theme system (Phase 1)

Dark is the default/primary brand experience. Light is derived from the same palette — warm parchment instead of white, deep-emerald ink instead of black, no bright green anywhere, gold deepened slightly for contrast on light surfaces.

Phase 2 — Storefront

4. Catalogue (Women / Men / Kids)

Purpose: Browse and narrow down products within a category. One shared component powers all three category routes.

Desktop — Dark theme

Desktop — Light theme

UX decisions:

- Gradient placeholder tiles instead of stock photos or broken images — no real photography exists yet.
- Filters kept deliberately minimal: badge, size, sort — matches the Brand Book's "less clutter" principle.
- Wishlist heart lives directly on the tile so saving never requires opening the product page.

Components: CatalogueView, FilterSidebar, ProductTile, Card. **Accessibility:** real button filter chips with visible active state, distinct colors per facet. **Responsive:** 3-col → 2-col grid; sidebar stacks above grid on mobile.

5. Product Detail Page

Purpose: Convert interest into an add-to-cart decision; surface "Complete the Look" pairings.

Desktop — Dark theme

Desktop — Light theme

Mobile

UX decisions:

- Sizes are real radio-group buttons, not a dropdown — a primary decision deserves full visual weight.
- "Add to Bag" gives inline confirmation rather than a toast.
- "Complete the Look" pulls real related products from catalogue data.

Components: ProductDetail, ProductTile, Button. **Accessibility:** role="radio"/aria-checked on sizes, state-aware wishlist aria-label.

Responsive: two columns collapse to one below lg.

6. Wishlist

UX decisions: Empty state routes back into shopping rather than a dead end. **Components:** ProductTile. **Accessibility:** aria-pressed heart buttons with state-aware labels. **Responsive:** 4-col → 2-col grid.

7. Cart

Mobile

UX decisions: Quantity stepper instead of free text; sticky order summary column on desktop; empty state routes back to shopping.

Accessibility: aria-live="polite" quantity value; per-product aria-labels on icon controls. **Responsive:** summary drops below line items on mobile.

Payment

Payment gateway integration (card, bank transfer) is wired up in Phase 5, alongside the real orders API. This step is a placeholder so the full checkout flow can be reviewed now.

Order Summary

Emerald Wrap Dress × 1 (M)	₦68,000
Heritage Gold Clutch × 2	₦62,000
Total	₦130,000

Place Order

Confirmation

A screenshot of the 'Order placed' confirmation page on the OMV website. The page has a dark green background. At the top, there is a navigation bar with the OMV logo on the left and links for 'Women', 'Men', 'Kids', 'Family Shopping', and 'Complete the Look' in the center. On the right side of the navigation bar are five circular icons: a magnifying glass, a heart, a shopping bag, a moon, and a hamburger menu. The main content area features a large yellow checkmark icon at the top center. Below it, the text 'Order placed' is displayed in a large, white, serif font. Underneath this, a smaller line of text reads: 'Reference OMV-20260808. Order tracking and email confirmation will connect to the real backend in Phase 5 — this confirms the checkout flow works end to end.' At the bottom center, there is a white button with rounded corners that says 'Continue Shopping' in a dark green font.

UX decisions: Payment section is visibly marked as a placeholder (dashed border, explanatory copy) rather than a fake-looking payment form. Placing an order generates a local reference and clears the cart so the full flow is testable now.

Components: Input, Button. **Accessibility:** labelled fields with autoComplete hints. **Responsive:** 2-col form → 1-col; summary moves below form on mobile.

9. Family Shopping

UX decisions: An explicit notice flags that profiles are browser-local until Phase 5 auth ships (PRD requires login for this feature — flagged as a deliberate interim decision, not a silent shortcut). Active profile switches with a single click on the card.

Components: Card, Input, Button, useFamily(). **Accessibility:** primary click target is a real button; delete is a separately labelled control. **Responsive:** 2-col → 1-col below lg.

What still needs your review

- Product placeholder treatment (gradient tiles) — acceptable, or prefer something else?
- Family Shopping usable pre-login as an interim state ahead of Phase 5 auth.
- Checkout's placeholder payment section messaging.
- Mock catalogue content (names/prices/categories) — first pass, not final merchandising.
- Anything missing from Phase 2's scope before Phase 3 begins.
