

OMV — Design Review

Phase 1-4 — Deployed & tested Live: omv-iota.vercel.app

Phase 4 Refinement Round 2 — Awaiting your approval

Fixes two specific gaps found in manual testing: notifications didn't do anything when clicked, and the "mannequin" was a generic silhouette with unrelated colour blocks rather than a real garment composition.

37. Admin Notifications — Now Actionable

UX: every row is a real Link or button, not static text. "New order received" jumps to that order; "Low stock alert" opens Inventory; "Product updated" opens that product's edit page. Opening a notification always marks it read. Existing unread badge/count behaviour unchanged.

38. Complete the Look — Real Garment Composition

UX: the mannequin now visibly wears the selected dress (fitted bodice + flared skirt), wears the headwrap at the head, and displays the bag beside the torso — a real per-garment composition, not colour blocks. Jackets visibly layer over what's underneath.

Verification: 7 outfit combinations, side by side

Wedding Guest (dress), Office (shirt+trousers+belt), Beach/Vacation (top+skirt+sandals), Birthday (dress+bag+accessory),

Sports/Active (top+trousers+shoes), Traditional/Cultural (flowing robe+headwear), and Office+Jacket layered — each produces a genuinely distinct silhouette, confirming the fix works across categories, not just the one screenshot shown above.

What still needs your review

- Confirm the notification destinations match your expectations — particularly the order deep-link (scrolls to the order in Admin Orders rather than a dedicated order-detail page, which doesn't exist yet).
- Confirm the mannequin's garment shapes read clearly at this abstraction level, or flag if any shape needs adjustment.
- Outfit Builder's size selection: auto-picks a default size on selection — confirm this UX default is right versus requiring an explicit choice.
- Anything else before Phase 5 begins.

Full detail for Phase 1-4's original scope and Round 1 refinement remains in REVIEW.md and prior REVIEW.pdf versions, all screenshots retained in /preview.
